Herndon, Virginia | (571) 239-4996 | linhpham0519@gmail.com | <https://www.linkedin.com/in/linh-p/>

SKILLS

- JavaScript, TypeScript, Python, React, Svelte, HTML, CSS, Jest, Cypress, Express, Redux
- PostgreSQL, Amazon Web Services, Git, Docker

PROFESSIONAL EXPERIENCE

Software Engineer | Capital One | August 2020 – August 2023

- Connected Finances | April 2023 – August 2023
 - Designed and developed a UI using TypeScript, React, Redux and Context API, enabling our product manager to independently add, update, and remove financial institutions, eliminating reliance on support tickets and reducing request turnaround time by 10+ hours per instance.
 - Implemented Jest unit tests for the UI covering 95% of the React codebase, significantly reducing troubleshooting time by 70% and improving deployment efficiency by 50%.
 - Led the team in conducting failover recovery exercises leveraging various AWS services across multiple GitHub repositories to ensure high availability and improve efficiency of disaster recovery by 20%.
- Data Retention & Data Governance | March 2022 – March 2023

The team supported the MVP launch of an enterprise initiative to combine six different existing data governance solutions into one platform, enhancing user experience and reducing processing time by 50%.

 - Built full-stack search and filter features using Svelte and Golang, supporting five parameter combinations, enabling business partners quickly locate relevant datasets.
 - Leveraged Svelte Store functionality to facilitate data sharing between components at different levels, reducing boilerplate code and improving the application's load performance by 15%.
 - Created comprehensive documentation outlining the application's workflow, enabling cross-team developers to accelerate their onboarding process by 40%.
 - Converted Figma wireframes into accessible, production-ready components aligned with design system standards. Partnered with product managers and designers in weekly sprints to refine implementations based on feedback.
- Treasury Management Portal | February 2021 – February 2022

The team supported modernization of a monolithic legacy app (written in Java) with microservice-based architecture (written in Golang), supporting a growing customer base of 2000+ business clients managing millions of US dollars in deposits per customer.

 - Led and implemented front-end testing effort using Jest and Cypress, ensuring UI components function flawlessly across devices.
 - Refactored the React front end codebase to meet the company-wide compliance goal of 100% WCAG 2.1 accessibility standards, ensuring seamless navigation for customers using screen readers.
 - Provided 24/7 on-call support, troubleshooting and maintaining the legacy Java codebase that interacted with 20+ systems, ensuring continuous system reliability and performance.
- Capital One Coding Academy | August 2020 – January 2021

Completed a 6-month training program to become a Software Engineer at Capital One, gaining expertise in full-stack development and agile methodologies.

 - Developed and implemented two enterprise-level features: user preference saving and image-to-PDF conversion using React libraries, resulting in a 70% increase in business productivity.

EDUCATION | Virginia Tech | B.S. in Chemical Engineering | Blacksburg, Virginia
